Re: System Update to Waiting Room Solutions

The WRS Development Team will be performing a software update to the Waiting Room Solutions System on or about September 11, 2010. The updated system will include the following enhancements and functionality. These have been designed to improve overall system functionality, security and usability. This update includes the following:

### Immunization Administration Tool

When CPT codes in the range of 90476-90749 are added as a Procedure on the Orders & Procedures Page an “Administer” icon will appear. Clicking this button will open a new window prompting the user to enter the following additional data elements:

Procedure	Code	Comments	Diagnosis	Ordered on	Action
ADENOVIRUS VACCINE, TYPE 4, LIVE, FOR ORAL USE	90476		Type ICD Code / Problem to search	09/10/2010	  

Figure 1: Procedure Code and Administer Icon

- Dose
- Route of Administration
- Site of Administration
- Manufacturer
- Lot Number
- Expiration Date

Using this function will create a data/time stamp for the immunization that indicates that the immunization was administered by that user with the date and time.

**Administer Immunization**

Administration Date: 09/10/2010

Expiration Date: 9/10/2011

Dose: 5cc

Route of Administration: injection

Administration Site: Otc

Lot number: 123456

Manufacturer: Almco

Save and Close Cancel

### **Various Other Enhancements & Adjustments**

Several enhancements and adjustments have been made to overall system functionality. These include, but are not limited to, the following items:

- Ability to search for doctor or add new doctor from the Medical History Tab in Patient Management
- Mobil Email entry has been added to the Contact Tab in Patient Management
- Patient Merge Tool now allows user to select the primary record
- Adjustments made to the level of severity of a drug-drug and drug-disease interaction notification
- Adjustments have been made to the Health Maintenance, including: (a) ability to assign a Health Maintenance Alert to an individual Patient (b) Filter/Search Field Print Report function and (c) ability to set an age range for a health maintenance alert
