REVOLUTIONIZING THE WAY YOU SEE PATIENTS

WRS Health's Telehealth and Patient Check-In Module are fully integrated into our EHR so you can manage a virtual patient encounter seamlessly on one platform: accessible from everywhere.

TELEHEALTH

Telehealth allows you a way to offer patients an alternative to in-office visits, as well as create a new revenue stream for your practice. On its own or paired together with the Patient Check-In Module, it effortlessly becomes part of the 4-step workflow.

CHECK-IN MODULE

The Patient Check-In Module is a mobile-friendly easy-to-use tool that helps ease the burden on an already busy front desk. Patients can verify demographic information, answer specialty specific ROS questions and make co-payments*.

The seamless integration with the appointment scheduler is phenomenal. We can see who has checked in or out and which patients are online, all in one place. This functionality has been extremely helpful for everyone – from the front office to the M.A.s and the doctors as well.”

LYNNE GOLDBERG,
PRACTICE MANAGER
Women's Health Associates
of Western, MA

WHY CHOOSE WRS HEALTH

- ✓ Capture Up-to-Date Patient Information
- ✓ Streamline Front Desk and Clinical Workflows
- ✓ Ensure Payment for Services Rendered
- ✓ Easy to Navigate Interface for Both Patient and Provider
- ✓ One Trusted Support Team for All Services
- ✓ WRSConect Mobile App – iOS and Android Compatible
- ✓ HIPAA Compliant

*Patient has the option to pay online or at the front desk. All online payments need TSYS Integration.
