Victoria Klein-Olarte, MSN, WHNP-BC \* Janet Davis, Sonographer

## Attention Pregnant Patients

### We Offer Genetic Screening Test

We are routinely offering Ultra-Screen, which consists of a sonogram (Nuchal Translucency) performed between 11 to 13 weeks of pregnancy and a blood test (ultra screen comprised of free Beta/PAPP-A) to identify babies who may be at an increased risk of Down Syndrome (Trisomy 21 or Trisomy 18).

The special ultrasound exam is performed by our sonographer and requires a different appointment from your visit with the Doctor. This test is voluntary. The test detects 91% of Down Syndrome babies. **This test cannot be performed after 13 weeks 6 days of pregnancy.**

Most insurance companies will pay for this service. You can call and verify with your Insurance Company prior to having your test done. If you do not have Insurance or do not have the coverage through your Insurance Company, the price for the test is \$150.00 to our office for the ultrasound, and \$95.00 payable to GeneCare.

**All fees due on the date of service. The check to GeneCare must accompany your lab test to be eligible for this discounted price.**

When calling your Insurance Company, please use the information provided below.

#### Procedure Codes Used for the Testing:

Sonogram	CPT 76813
Lab Test	CPT 84702, 84163 & 80500
Diagnosis Code	V28.3
